# DA DOME

DECO3500 - JUST 5 VIBES

## What is it?

*Da Dome* is a touch-activated musical installation, built to fill the gaps between stages at a multi-stage festival.

Each level of the dome surface is split into musical stems: vocals, keys, drums, and bass; each wired up with buttons, LEDs, and a speaker underneath.

## How it works?

Bring a friend or make a new one to interact with *Da Dome*.

Pressing a button plays a stem, which also lights up the activated panel.

The more buttons pressed, the more stems layer in, and the brighter the dome shines.

There's no set order, no wrong way to play, and no minimum group size.

One hand sparks the music. More hands make it a song.

No login, no app, no instructions.

Press. Play. Watch it glow.

THE GAP BETWEEN STAGES JUST GOT A SOUNDTRACK.

## Why It Works?

We interviewed eight festival-goers and ran a live site probe to understand what actually happens in the gaps between sets.

## Our Main Finding

Gaps between sets average 20–30 min, and most people spend them just standing around, often separated from their group with no signal to call or text.

*Da Dome* sits directly in that physical gap between stages, turning dead space into somewhere worth being.

It needs no internet or phone connection, fully physical and self-contained, working whether the network does or not.

It also works as a landmark. Big, bright, and visible from a distance in a space with no fixed meeting point. Since one hand is enough to join in, this makes it a low pressure way to connect with others.

## Who we are

Ella, Jasmine, Lachie, Lily, and Sean.

A team from DECO3500 - Social & Mobile Computing at UQ.

*Da Dome* went through several rounds of prototyping: rough paper mock-ups to test size and reach, small-group testing to refine how the interaction worked, and the current build of acrylic panels, ESP32, LEDs, and buttons.

It's designed around the *Designed Experiences for Co-located Interaction* framework, built specifically for people who are in the same place, at the same time.

## Find us
